QUEST SENIOR GAS RANGE

6 OPEN BURNER TOP

FRY TOP

MODEL SGR HOT TOP

The ultimate in Heavy Duty Gas Range Design. Especially for the large hotel or institution where rigorous use and exceptionally heavy service demand a gas range of superior design. QUEST Senior Ranges have been used by leading Canadian operators for many years. Their built-in durability and high efficiency make them the leader in their field.

QUEST Senior Gas Ranges have been made in Canada for over 30 years. They give the user Speed, Flexibility and Durability. The Range is a full 36" wide. Superior weight of all QUEST Senior Gas Ranges is due to their heavily reinforced steel construction, so engineered for permanent rigidity and long life. The simple streamlined design makes cleaning easy, especially with the stainless steel front, shelf, and hiback, standard on all QUEST ranges.

All QUEST Ranges have **aluminized steel ovens**, no enamel crazing or cracking, no paint to chip. The aluminized surface of the oven reflects heat which ensures even cooking.

Features to help keep your kitchen cooler are the air-gap insulated high back and shelf, and the full length vent under the plate shelf, which is 19" above the range top. All QUEST Ranges can be banked together.

QUEST Senior Ranges are HEAVIER, LARGER and MORE POWERFUL (for proof see specifications and ratings on reverse side).

The unique and proven oven design on all QUEST Ranges features counterbalanced welded oven doors (no springs), for trouble free positive closing and opening action, retarded venting and metal clad transite oven deck for solid even heat baking and economical operation. **No other gas range will cook or bake as evenly.** The large ovens will accommodate 18 x 26 bake pans or extra large roast pans. Safety shut off and thermostat control conveniently located.

Three basic top arrangements are shown, the popular Hot Top, Fry Top, and Open burner style. All castings are extra rugged, fry top is of solid steel plate, a full 3/4" thick, for non-warping and non-cracking performance. The open burners are newly designed for ultra fast heat.
